Projections of Future Climate Past climate and future scenarios with tipping elements

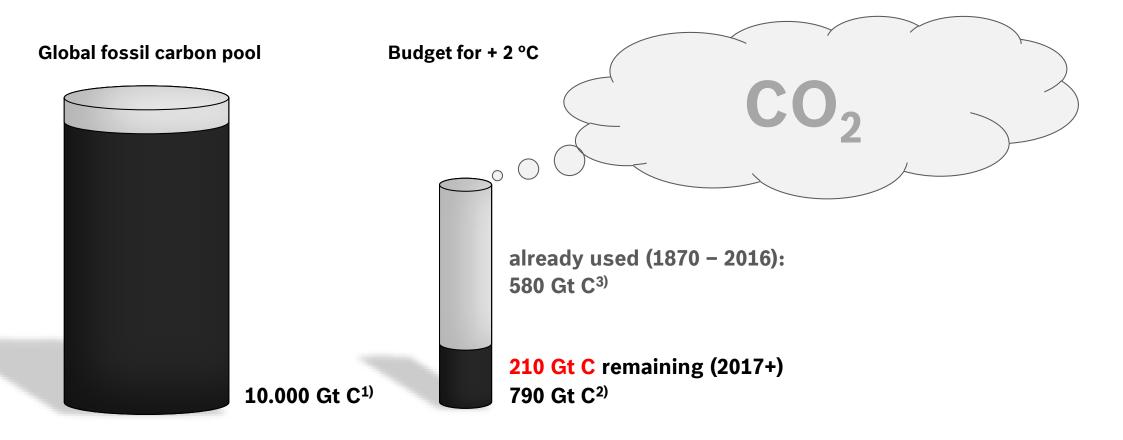

▶ The + 1.5 .. 2 °C target is well justified because important tipping elements are at risk.

CR/FUR | 03/24/2017 Temperature anomaly relative to 1850 – 1900; WAIS = West Antarctic Ice Sheet; THC = thermohaline circulation (e.g. Gulf Stream / Atlantic meridional overturning); Stuttgarter Energiedialog ENSO = EI Niño-Southern Oscillation; EAIS = East Antarctic Ice Sheet; RCP = Representative Concentration Pathway (i.e. emissions scenario).

End of Fossil Fuel Use Carbon budget for + 2 °C illustrated

CR/FUR | 03/24/2017 Stuttgarter Energiedialog 1) Estimate by USGS and US DOE, 2008; 2) IPCC WG1 AR5 2013, until the time of peak temperature; 3) The Global Carbon Project (2016)
